Self Reflection

Instead of a final exam, we will do a final self reflection. Please respond thoughtfully to the prompts below. The final reflection should be 2-3pages, typed, single spaced.

- Go back through your homework assignments and reflect on what you have learned this semester.
 1. Rerun your code. Do you understand your results better looking back?
 2. What specific things are you proud of accomplishing in these assignments?
 3. What specific things do you think you could have improved?
- Reflect on your commitment to and efforts in Numerical Analysis this semester. If you were assigning yourself a grade what grade do you think you deserve and why?
- Are there any assignments that you have submitted (or resubmitted) that should be re-graded?
