

Day 6 - Continue if statements.

Often we need to check multiple things
or there are many categories to check...

... → the else if lets us do that.

IF - ELIF - ELSE

age = 12

if age < 4:

print("Admission is free")

checks less than 4

elif age < 18:

print("Admission is \$20")

checks between
4 and 18 but
less than 18

else:

print("Admission is \$40")

checks 18 or more.

You can use as many of these blocks as you want!
You don't have to end with an else.

The if - elif - else block will stop
once one condition is met...

All of the things we do with lists and for loops
can be part of our if statements.

Checking for empty lists.
